

Air Conditioner Evaporator Coil and Cavity Cleaner

After operating the vehicle's air conditioning, it is not uncommon to see a small amount of water under the vehicle. This is perfectly normal and a good sign – it is the condensate drain, which plays an important role in removing condensation produced by the A/C evaporator coil. If the drain line is not clear, algae and mold can grow inside the cavity and on the evaporator coil. This can also clog the drain, causing elevated humidity, musty odors and water damage inside the vehicle.

Features and Benefits:

- Air Conditioner Evaporator Coil & Cavity Cleaner effectively cleans the evaporator coil and the cavity where the evaporator coil resides
- Easy-to-use aerosol cleans the evaporator coils, the cavity and the drain hose, removing any debris, musty soils, and dirt build up
- The foamy product lifts dirt and absorbs excess moisture and condensation while flushing the drain hose to prevent blockages and subsequent offensive odours.

Applications:

Connects to the drain hose of the A/C system – follow the directions on the label.

Available packaging

PACKAGE TYPE	PART #	PALLET QTY	1-5 CASES	6-11 CASES
510G Aerosol - Label 20 oz Can	TNDS8075	864	\$9.03	\$8.78
