

Anti-corrosion Spray Film

New or exposed metal, especially in autobody repairs, requires a protective anti-corrosion coating. The film needs to protect the surfaces from the elements.

Features and Benefits:

- Anti-corrosion Spray Film will provide the required coating, film strength and protection to fresh or exposed metal surfaces
- After spraying on the surfaces, the flowable coating sets up to a semi-soft, translucent to clear film
- Film remains soft and pliable, and will not peel, chip or crack
- Convenient aerosol format provides ease of application
- Use inside vehicle rocker panels, doors, truck tail gates, trunk lids, any surface that requires corrosion protection
- Can be applied in multiple coatings depending on degree of protection required
- Will creep into cavities and hard-to-reach areas
- Excels at salt spray corrosion tests

Directions for use:

Apply Anti-corrosion Spray Film into or onto the surfaces requiring protection. 1-3 coats can be applied, depending on the degree of protection required.
