

Surface Prep Cleaner

Industrial strength solvents used for loosening and removing adhesives on items such as wheel weights, can leave a film on the surface where the adhesive was. This film can affect the performance of the next adhesive. A surface preparation product should be used for the final surface cleaning, to ensure the next adhesive performs as intended.

Features and Benefits:

- Isopropyl alcohol –based cleaner
- Effectively removes solvent cleaner and adhesive residues on surfaces
- Dries quickly leaving a clean, dry surface
- Use on surfaces prior to the application of new adhesive
- Aerosol format provides ease of application

Applications:

- Use on metal surfaces, industrial and machine parts, steel & aluminum wheel rims
- Prep surfaces before wheel weight and body molding application
- For painted surfaces or glass, apply Surface Prep Cleaner to a cloth and rub the contaminated surface until clean
- Always test product on an inconspicuous area first to ensure no harm to the surface
