

OEM Chemicals in a National Brand

PRODUCT INFORMATION

# Lubricants

## Rim Release

### FEATURES & BENEFITS

Rim Release is a multi-application chemical that penetrates between close tolerance parts composed of the same or different materials. It quickly dissolves and loosens rust, corrosion and dirt. As it penetrates into the tightest areas, it carries lubricating oil to free stuck or seized materials for easy removal, separation and smooth operation. This product does not have the harsh odour usually associated with similar products. The solvents in Rim Release help clean and remove grease, tar and other build-up, leaving a very thin coating to help protect metals and prevent future seizing. Ideal for use in Tire and Auto service shops, as well as for heavy-duty, industrial, agricultural and marine applications.

### DIRECTIONS FOR USE

Spray product directly on the surfaces of the parts requiring loosening or treatment. Allow the product to soak into the surface. Apply appropriate force to loosen sticking or binding parts.

### PRECAUTIONS

REFER TO SAFETY DATA SHEET FOR PRECAUTIONS IN HANDLING.

### AVAILABLE PACKAGE SIZES

TNDS8153 3.78L metal can

TNDS8253 18.9L pail

TNDS8353 205L drum
