Cleaners

Engine Flush

FEATURES & BENEFITS

Engine Flush is a proprietary blend of solvents, detergents and dispersant additives that will effectively dissolve oil contaminants to aid in their removal from the engine. Engine Flush will thin out heavily oxidized or thickened oil and break down sludge and varnish deposits, which can then be drained out with the used oil.

DIRECTIONS FOR USE

Add entire contents of the container to warm engine oil just before draining. If the dipstick shows full, sufficient oil should be removed. Allow the engine to run at idle for a few minutes. Drain the crankcase of oil, replace the oil filter and recharge the crankcase with new motor oil as recommended by the manufacturer.

PRECAUTIONS

REFER TO SAFETY DATA SHEET FOR PRECAUTIONS IN HANDLING.

AVAILABLE PACKAGE SIZES

TNDS8639 350ml bottle

Varnish, sludge and thickened engine oil in the crankcase and lubrication system can result in sticking hydraulic lifters, restricted lubricant supply, partial seizure between piston and cylinder walls, crankshaft and camshaft journals and bearings. This may result in cranking overload, scoring or total seizure of the engine.
